Visions LLC provides Behavior Support Services throughout the state of Oregon to older adults, families, and care providers impacted by dementia, traumatic brain injuries, and other neuro-cognitive disorders. Visions utilizes Applied Behavior Analysis (ABA) and Positive Behavior Support (PBS) approaches to more fully understand behaviors of concern. Behavior support strategies are then developed based on this knowledge. The goal is to both reduce/eliminate the behaviors of concern while developing new behaviors that may be effective for the individual in meeting their needs and desires and enhancing their quality of life. Person Centered strategies are used throughout this process.
